

UNIVERSITY OF EDINBURGH  
COLLEGE OF SCIENCE AND ENGINEERING  
SCHOOL OF INFORMATICS

**TYPES AND SEMANTICS FOR PROGRAMMING LANGUAGES**

**Saturday 1<sup>st</sup> April 2017**

**00:00 to 00:00**

**INSTRUCTIONS TO CANDIDATES**

**Answer QUESTION 1 and ONE other question.**

**Question 1 is COMPULSORY. If both QUESTION 2 and QUESTION 3 are answered, only QUESTION 2 will be marked.**

**All questions carry equal weight.**

**CALCULATORS MAY NOT BE USED IN THIS EXAMINATION**

Year 4 Courses

Convener: ITO-Will-Determine

External Examiners: ITO-Will-Determine

**THIS EXAMINATION WILL BE MARKED ANONYMOUSLY**

# 1. THIS QUESTION IS COMPULSORY

This question uses the library definition of `list` in Agda. Here is an informal definition of the predicates  $\in$  and  $\subseteq$ . (In Emacs, you can type  $\in$  as `\in` and  $\subseteq$  as `\subseteq`.)

$$\begin{array}{c}
 \text{here} \frac{}{x \in (x :: xs)} \qquad \text{there} \frac{x \in ys}{x \in (y :: ys)} \\
 \\
 \text{done} \frac{}{[] \subseteq ys} \\
 \\
 \text{keep} \frac{xs \subseteq ys}{(x :: xs) \subseteq (x :: ys)} \qquad \text{drop} \frac{xs \subseteq ys}{xs \subseteq (y :: ys)}
 \end{array}$$

(a) Formalise the definition above.

[10 marks]

(b) Prove each of the following.

(i)  $2 \in [1, 2, 3]$

(ii)  $[1, 3] \subseteq [1, 2, 3, 4]$

[5 marks]

(c) Prove the following.

If  $xs \subseteq ys$  then  $z \in xs$  implies  $z \in ys$  for all  $z$ .

[10 marks]

## 2. ANSWER EITHER THIS QUESTION OR QUESTION 3

You will be provided with a definition of intrinsically-typed lambda calculus in Agda. Consider constructs satisfying the following rules, written in extrinsically-typed style.

Typing:

$$\text{leaf} \frac{\Gamma \vdash M \text{ : } A}{\Gamma \vdash \text{leaf } M \text{ : } \text{Tree } A} \quad \text{branch} \frac{\Gamma \vdash M \text{ : } \text{Tree } A \quad \Gamma \vdash N \text{ : } \text{Tree } A}{\Gamma \vdash M \text{ branch } N \text{ : } \text{Tree } A}$$

$$\text{caseT} \frac{\Gamma \vdash L \text{ : } \text{Tree } A \quad \Gamma, x \text{ : } A \vdash M \text{ : } B \quad \Gamma, y \text{ : } \text{Tree } A, z \text{ : } \text{Tree } A \vdash N \text{ : } B}{\Gamma \vdash \text{case } L \text{ [leaf } x \Rightarrow M \mid y \text{ branch } z \Rightarrow N] \text{ : } B}$$

Values:

$$\text{v-leaf} \frac{\text{Value } V}{\text{Value (leaf } V)} \quad \text{v-branch} \frac{\text{Value } V \quad \text{Value } W}{\text{Value (} V \text{ branch } W)}$$

Reduction:

$$\xi\text{-leaf} \frac{M \longrightarrow M'}{\text{leaf } M \longrightarrow \text{leaf } M'}$$

$$\xi\text{-branch}_1 \frac{M \longrightarrow M'}{M \text{ branch } N \longrightarrow M' \text{ branch } N} \quad \xi\text{-branch}_2 \frac{\text{Value } V \quad N \longrightarrow N'}{V \text{ branch } N \longrightarrow V \text{ branch } N'}$$

$$\xi\text{-caseT} \frac{L \longrightarrow L'}{\text{case } L \text{ [leaf } x \Rightarrow M \mid y \text{ branch } z \Rightarrow N] \longrightarrow \text{case } L' \text{ [leaf } x \Rightarrow M \mid y \text{ branch } z \Rightarrow N]}}$$

$$\beta\text{-leaf} \frac{\text{Value } V}{\text{case (leaf } V) \text{ [leaf } x \Rightarrow M \mid y \text{ branch } z \Rightarrow N] \longrightarrow M \text{ [} x := V \text{]}}$$

$$\beta\text{-branch} \frac{\text{Value } V \quad \text{Value } W}{\text{case (} V \text{ branch } W) \text{ [leaf } x \Rightarrow M \mid y \text{ branch } z \Rightarrow N] \longrightarrow N \text{ [} y := V \text{] [} z := W \text{]}}$$

- (a) Extend the given definition to formalise the evaluation and typing rules, including any other required definitions. [12 marks]

- (b) Prove progress. You will be provided with a proof of progress for the simply-typed lambda calculus that you may extend. *[13 marks]*

Please delimit any code you add as follows.

```
-- begin  
-- end
```

### 3. ANSWER EITHER THIS QUESTION OR QUESTION 2

You will be provided with a definition of inference for extrinsically-typed lambda calculus in Agda. Consider constructs satisfying the following rules, written in extrinsically-typed style that support bidirectional inference.

Typing:

$$\text{delay} \frac{\Gamma \vdash M \downarrow A}{\Gamma \vdash \text{delay } M \downarrow \text{Lift } A}$$

$$\text{force} \frac{\Gamma \vdash L \uparrow \text{Lift } A}{\Gamma \vdash \text{force } L \uparrow A}$$

- (a) Extend the given definition to formalise the typing rules, and update the definition of equality on types. [10 marks]
- (b) Extend the code to support type inference for the new features. [15 marks]

Please delimit any code you add as follows.

```
-- begin
-- end
```
